

APOLLO AIRLINES INSTRUMENT TETHER

The Apollo Instrument Tether – Airlines is a heavy-duty retractable retention system specifically developed for the airline and baggage handling industry. Designed to secure wireless barcode scanners and handheld instruments, it provides continuous equipment retention while allowing unrestricted movement during baggage processing, freight handling, and aircraft ground operations.

The retractable tether keeps scanners readily accessible, reducing the risk of accidental drops, equipment damage, and loss in busy operational environments. Supplied complete with the Apollo Instrument Tether Lanyard, the system allows the scanner to be quickly disconnected when required while the retractor remains securely attached to the operator. Replacement Instrument Tether Lanyards are also available separately as spare parts.

FEATURES

- Purpose-built for airline and baggage handling operations
- Designed for wireless barcode scanners and handheld instruments
- Retractable tether keeps equipment secure and readily accessible
- Reduces the risk of dropped or misplaced equipment
- Improves operator efficiency during repetitive scanning tasks
- Heavy-duty retractable design for demanding daily use
- Compatible with the Apollo Custom Instrument Tether Lanyard (QC2-0003)
- Allows quick disconnection of the scanner while leaving the retractor attached to the operator
- Suitable for baggage handling, cargo terminals, logistics and ground support operations

SPECIFICATIONS
